PRESENTATION

IMPEX EUROPA was founded in 1984 by a professional team with large experience in the chemical sector for manufacturing, sale and distribution of rodenticide products, phytosanitary products, fertilizers and domestic insecticides. **Specialized in the rodenticide market and its derivatives.**

Over the years, IMPEX EUROPA as it consolidates, it **develops new technologies, researching new products** for a better effectivity and competitiveness in the national and international markets with a number of successes that are unique in the rodenticide sector.

In 2010 it opens a **modern manufacturing plant** with the most **advanced technologies** that allows producing entirely from the bait stations to the completely range of rodenticides from last generation going through the glues and adhesive traps, all of it with the best quality - price relationship of the international market.

Since 2010 to the present, R+D inversion did not stop growing. It has tripled the number of lines of production and it has introduced some advances in the market like a new filter paper (HFC) that ensures that the bait could resist to extreme conditions, or the paraffined baits revolution which supposed the modular fusion. **An exclusive process of IMPEX EUROPA that allows baits with less paraffin and more cereal.**

IMPEX EUROPA apart from manufacturing its own brands, **it produces for third parties in any type of formulations and active substances**, customizing the product in the format / presentation (bags, cases, buckets, boxes, etc.) and packaging that the consumer desires.

We will be pleased to send you any information, explanation or physical samples, if you wish it.

Sincerely,

Rosa Jamardo
r.jamardo@impexeuropa.es

Special Production Department

WE ARE MANUFACTURERS

WITHOUT INTERMEDIARIES

WITHOUT IMPORTERS

WITHOUT ROYALTIES

OWN RESEARCH
NEW MANUFACTURING
TECHNOLOGIES

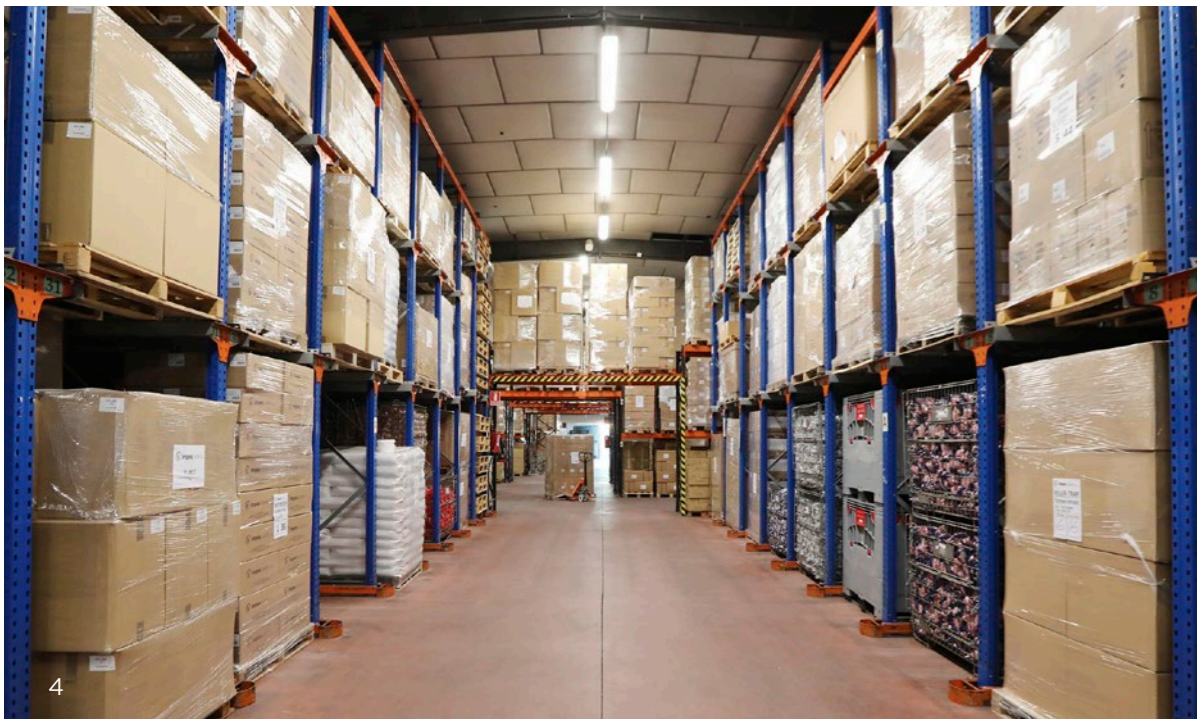

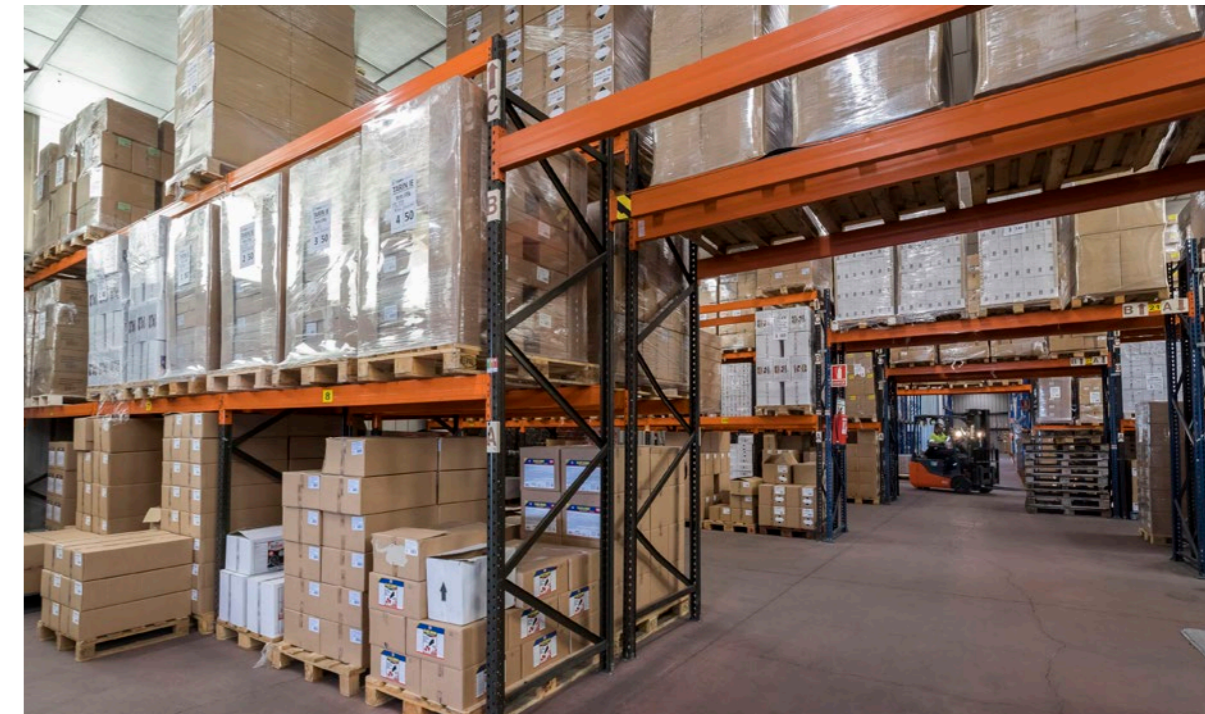

QUALITY
MOST PALATABLE
RAW MATERIALS

GREAT PRODUCTION
HIGH PERFORMANCE
AT A LOWER PRICE

The Faculty of Chemistry of Santiago de Compostela's University collaborates with IMPEX EUROPA in the research and development of its rodenticides.

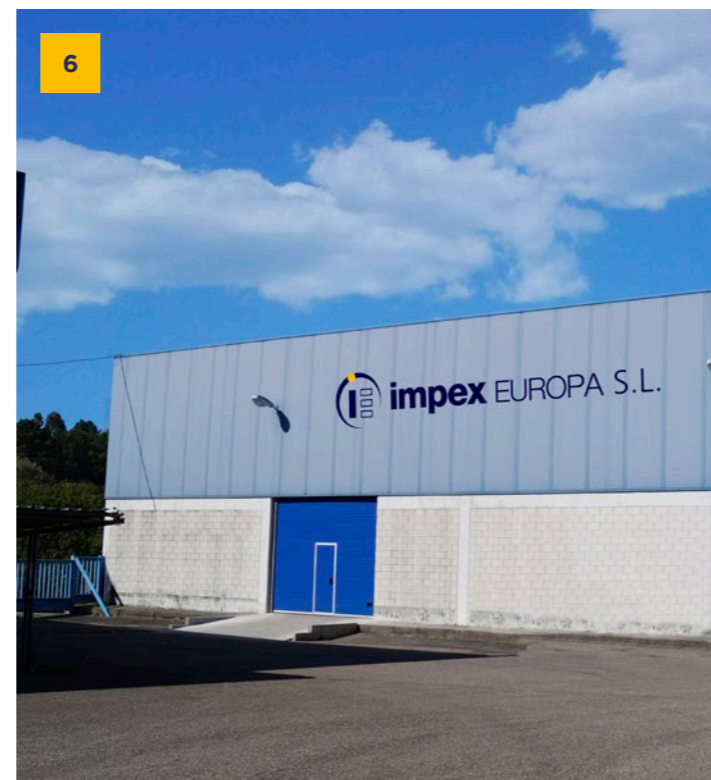

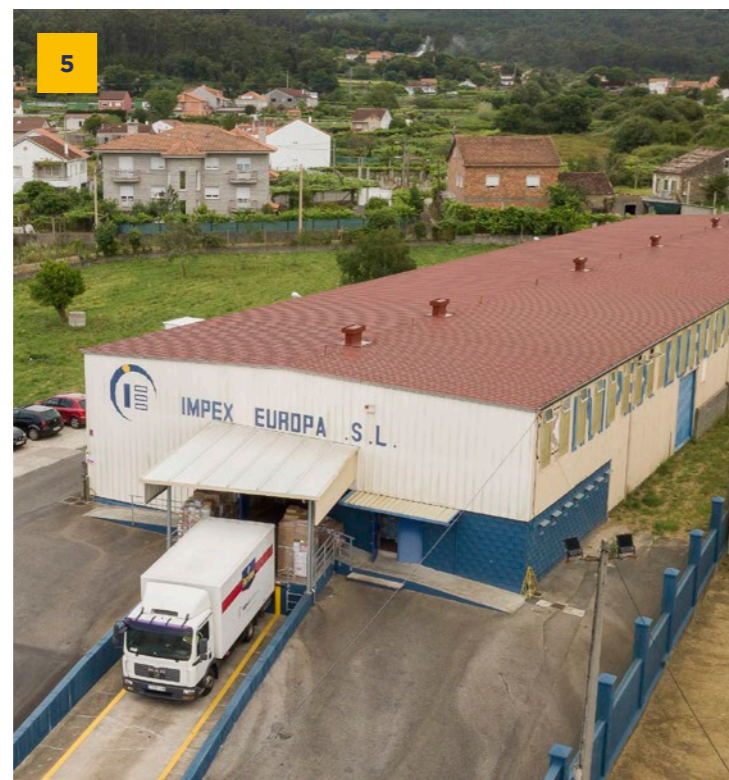

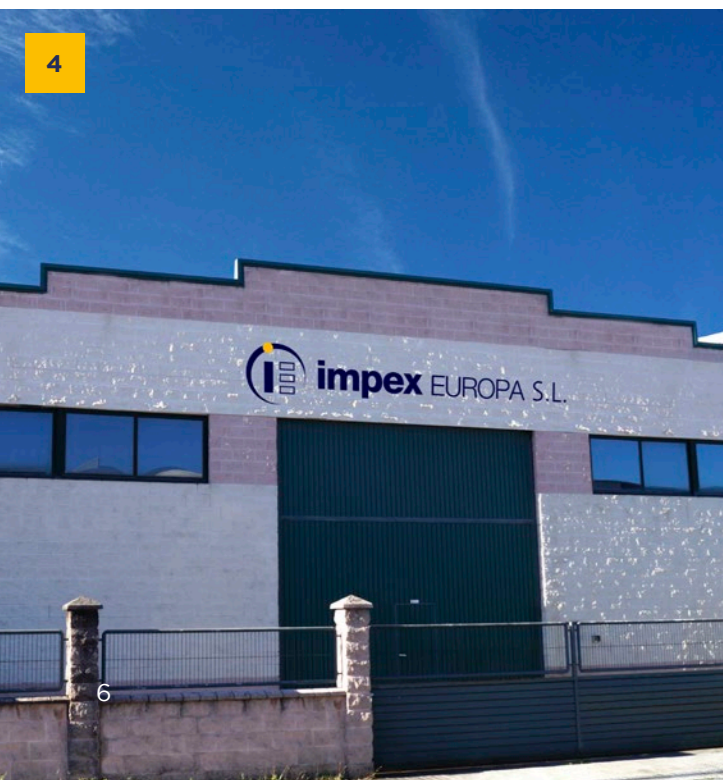

OUR FACILITIES

We have a surface area of approximately **20.000 m²** that includes:

- 1 Packaging and manufacturing plant
- 2 Administration, R+D and laboratory
- 3 Consumables & Final product warehouse
- 4 Manufacturing plant of pellets and cereals
- 5 Logistic plant
- 6 Raw material & packages warehouse

RODENTICIDE FRESH BAIT

Fresh bait is the latest discovery in rodenticides and it is without any doubt.

the best and most effective commercial formulation known today. Its invention and use comes from the Baltic countries where the peasants made bait balls with a dough prepared with bread-making wheat flour, virgin vegetable oil (olive or sunflower) and a small part of poison that they used to fight vermin. The result was magnificent.

Between the years 1982-1983, an Italian businessman who knows about this type of artisan baits, he designed a system to dose the oil-soaked bait into small filtered paper bags. With this method it does not lose its organoleptic characteristics at all, it promotes its conservation and attraction for a long time.

After making lots of trials with flours and different mixtures of cereals and oils (including animal fats, tallow and oils) trying to achieve the same appetite success with lower costs, effectivity studies in the different laboratories and multitude of field tests confirmed that the formula used by farmers was, with great difference, the one that achieved the greater appetite in rodents with 100% success results.

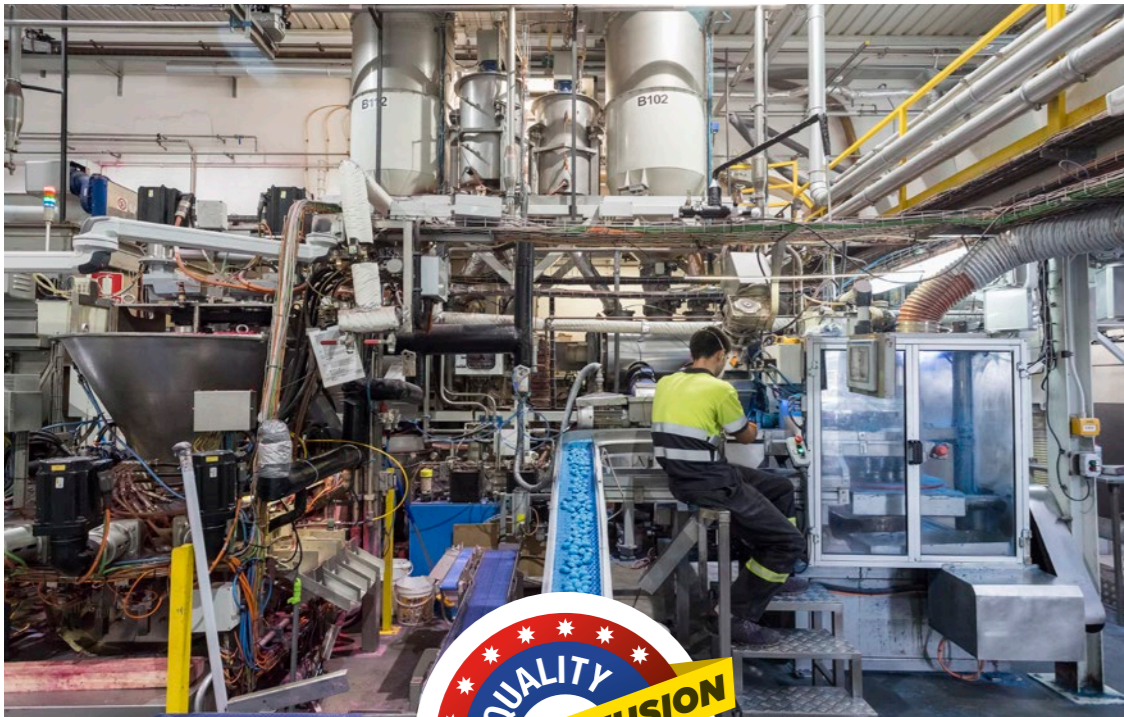

The industrial sale of the first fresh bait was a resounding success in all those countries where it was being registered for commercialization.

IMPEX EUROPA achieve in those years, shortly after starting production, the exclusive of the distribution for Spain, Portugal and other countries. In a short time, the new rodenticide is the undisputed leader in sales in Europe.

Due to the commercial success, it begins to arise, with more or less acceptance, some imitations of all types, lots of them with precarious quality relying on the generic name of “fresh bait”, composed with low quality cereals, bad millings (coarse flours), poor oils or animal fats that dry, rancid and deteriorate the baits in their configuration, durability and palatability, whose only intention is to offer a more economical kind of “wet paste”.

IMPEX EUROPA continues being loyal to the traditional and unique formula of the real fresh bait rodenticide in its new facilities in Villagarcía de Arosa where it produces 3.600 Tn/year. We have introduced as an improvement a new filter paper (HFC) that ensures that the use of the fresh bait in wet conditions, even total immersion, or temperatures above 100oC, it maintains in perfectly usage conditions.

PARAFFINED RODENTICIDE

NOVELTY IN THE PARAFFINED RODENTICIDE WORLD

MODULAR FUSION

Innovative process of high production and with the best quality and palatability standards in the world market. Technologies, formulations and exclusive machinery designed entirely by IMPEX EUROPA, S.L.

MANUFACTURING PROCESS

We start with a new formulation based on a specific and unique manufacturing plant that has been built for this purpose. The process consists on 3 phases.

PHASE 1

Hot mixing of the exact amount of paraffin and different components at a regular temperature throughout all the process.

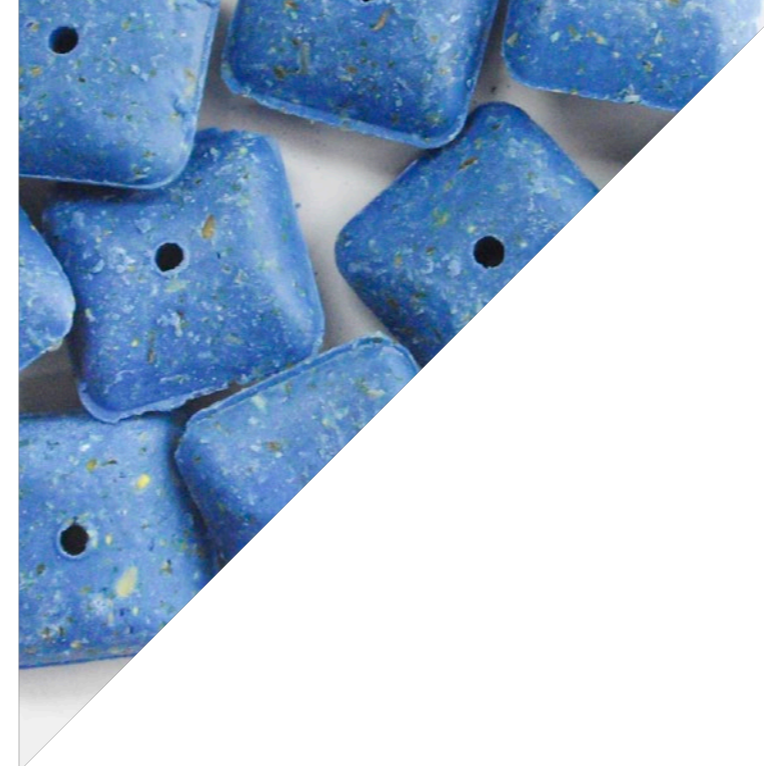

PHASE 2

The high speed chain manages a multi-format mold system that forms 600/800 pieces per minute at a constant temperature in order not to disrupt the manufacturing process.

PHASE 3

Pieces are put into the forced cooling system at 3 15 degrees below zero. The sudden change in temperature manages to maintain the same molecular compression of high temperatures and it gives the baits high strength and enormous resistance to humidity, even to immersion without deteriorating its components at all.

With this new technology it is possible to produce with a minimal contribution of paraffin. This allows a high cereal content and therefore a high appetitive and effectivity. Due to the high production speed, the content of palatable matter and the low proportion of paraffin used, the result is a highly effective product with the best quality-effectiveness-price relationship in the paraffined rodenticides' worldwide market.

BAITS

FRESH BAIT

Anticoagulant fresh bait of the highest palatability and effectiveness, formulated with cereal micro-flours and vegetable oils of the highest quality.

It kills rats and mice in a single ingestion.

IMPEX EUROPA DOES NOT WORK
WITH PALM OILS & ANIMAL FATS

BROMADIOLONE

COMPOSITION:
Bromadiolone 0,0029% and 0,005%

Filter paper of high resistance HFC

PARAFFIN OVULES

Composed of flours and cereals with paraffin support. Ideal for fighting against all kinds of mice and rats.

Its pioneering manufacturing process makes it possible to produce a bait with less paraffin and therefore greater palatability.

4 g / 5 g

- Modular fusion.
- Resistant to humidity.
- It contains bittering agent for people and domestic pets.

CEREAL BAIT

Rodenticide bait, prepared with mixtures of dehulled whole cereals, in order to facilitate the introduction of the poison.

Against field mice, sewer rats, black rat, etc.

Cereals

In micro-perforated bags of 25 g and in bulk.

It contains bittering agent for people and domestic pets.

Available in:

- BROMADIOLONE 0,0029% and 0,005%
- BRODIFACOUM 0,0029% and 0,005%
- DIFENACOUM 0,0029% and 0,005%

ACTIVE INGREDIENT	REF.

0,005%	C03.004		

PELLET BAIT

Pellet composed of flours and cereals.

It develops its action by ingestion, causing the death of all species of rats and mice: sewer rats, black rats, field rats, etc., with a single ingestion.

In micro-perforated bags of 25 g and in bulk.

It contains bittering agent for people and domestic pets.

Available in:

- BROMADIOLONE 0,0029% and 0,005%
- BRODIFACOUM 0,0029% and 0,005%
- DIFENACOUM 0,0029% and 0,005%

0,005%	C08.029		

EXTRA PELLET BAIT

Extra pellet composed of 85% of flours and cereals. It does not contain paraffin.

Exclusive manufacturing system that allows uniform baits and high compaction, which gives it great resistance to humidity. As it does not contain paraffin, the higher percentage of cereals makes it a highly palatable product. Indoor and outdoor use.

It contains bittering agent for people and domestic pets.

Available in:

- BROMADIOLONE 0,0029% and 0,005%
- BRODIFACOUM 0,0029% and 0,005%
- DIFENACOUM 0,0029% and 0,005%

BAIT STATIONS

P.K. 1847

Rodenticide bait safety container

Made of high impact polypropylene. It avoids danger to children, pets and protects the bait.

- ✓ Mice
- ✓ Rats

For solid and liquid baits.

Lock with key.

253 x 175 x 100 mm

How to use:

Place the bait station close to the wall in places frequented by rodents. The feeders are designed so that they are easily accessible to rodents.

REF.		
D01.029	20 units	20 boxes

P.K. 1847 TT

Rodenticide bait safety container

It has the same characteristics as the 1847, but with a transparent lid that allows you to visualize the use of the baits without opening it.

Made of high impact polypropylene. It avoids danger to children, pets and protects the bait.

- ✓ Mice
- ✓ Rats

For solid and liquid baits

Transparent lid.

Lock with key.

253 x 175 x 100 mm

How to use:

Place the bait station close to the wall in places frequented by rodents. The feeders are designed so that they are easily accessible to rodents.

REF.		
D01.031	20 units	20 boxes

BAIT STATIONS

P.K. 041

Rodenticide bait safety container

Special for mice and small rodents. Reusable and suitable for pest control professionals.

It avoids danger to children, pets and protect the bait.

- ✓ Mice

For solid and liquid baits.

Lock with key.

135 x 91 x 36 mm

How to use:

Place the bait holder close to the wall in places frequented by rodents

REF.		
D01.039	96 units	30 boxes

P.K. 042 TT

Rodenticide bait safety container

Special for mice and small rodents. Reusable and suitable for pest control professionals.

It avoids danger to children, pets and protect the bait.

- ✓ Mice

For solid and liquid baits.

Completely transparent.

Easy security lock. Without key.

125 x 90 x 38 mm

How to use:

Place the bait box close to the wall in places frequented by rodents.

REF.		
D01.033	24 units	30 boxes

BAIT STATIONS

P.K. 078

Rodenticide bait safety container

Made of high impact polypropylene. It avoids danger to children, pets and protects the bait.

- ✓ Mice
- ✓ Rats

For solid and liquid baits.

Lock with key.

228 x 125 x 73 mm

How to use:

Place the bait station close to the wall in places frequented by rodents. The feeders are designed so that they are easily accessible for rodents.

REF.		
D01.123	30 units	24 boxes

P.K. 080 R

Rodenticide bait safety container

Made of high impact polypropylene. It avoids danger to children, pets and protects the bait.

- ✓ Mice
- ✓ Rats

For solid and liquid baits.

Lock with key.

221 x 130 x 75 mm

How to use:

Place the bait station close to the wall in places frequented by rodents. The feeders are designed so that they are easily accessible for rodents.

REF.		
D01.333	30 units	30 boxes

BAIT STATIONS

P.K. 1822

Rodenticide bait safety container

Very resistant, high quality tunnel. "It has 2 entrances and 2 exits."

It avoids danger to children, pets and protects the bait.

- ✓ Mice
- ✓ Rats

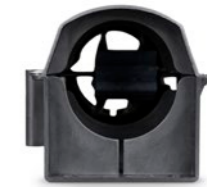

For solid and liquid baits.

Lock with key.

315 x 108 x 86,5 mm

How to use:

Place the bait station close to the wall in places frequented by rodents.

REF.		
D01.037	24 units	24 boxes

HOOKS

HOOKS FOR BAITS

Strong hooks for placing baits.

It is intended for use in pest-control. Easy, comfortable and fast.

Special for sewers.

170 x 5 mm

REF.		
D01.334	1000 units	-

RODENT GLUE

RODENT GLUE

Colourless and odorless glue for capturing mice, rats, domestic mice and insects.

Poison free.

Tube 135 g.

REF.		
D01.170	50 units	72 boxes

TRAPS

SNAP

Snap Trap

For rats and mice, ready to use. Handle it with care.

Mice Rats

Permanent bait.

Poison free.

Little 95 x 50 mm

Big 152 x 84 mm

Gigant 196 x 110 mm

SIZE	REF.		
Little	D01.016	24 units	54 boxes
Big	D01.020	12 units	84 boxes
Gigant	D01.122	24 units	54 boxes

KILLER-TRAP

FLIES / BEES

Non-polluting and reusable fly and wasp trap. Easy to use and highly efficient. Preferably outdoor use.

Ecologic.

Poison free.

	REF.		
	Flies D03.009	12 units	16 boxes
REPLACEMENT	Flies D03.042	36 units	130 boxes
	Bees D03.008	12 units	16 boxes
REPLACEMENT	Bees D03.043	36 units	130 boxes

ENTOMOLOGICAL GLUE

INSECT

Glue for flying and crawling insects.

Glue for the capture of flying and crawling insects.

- | 750 ml
- | Ecologic.
- | Free poison.
- | Apply with brush.

REF.		
D04.234	24 units	30 boxes

ADHESIVE TAPE

Adhesive tape for flying and crawling insects.

Adhesive tape for pest control of both flying and crawling insects in trees and plants.

- | 5 m x 5 cm
- | Ecologic.
- | Free poison.
- | Easy to use.

REF.		
D04.232	12 units	144 boxes

MASTIC FOR GRAFT

Healing resin for wounds, pruning and grafting on all types of plants, trees or shrubs.

It forms an elastic and porous film that heals and prevents diseases, promoting vegetative growth by allowing perspiration.

- | It does not drip.
- | It maintains its protective properties for a long time.

SIZE	REF.
